

Do's and Don'ts of Substance Abuse Prevention Implementation in Schools: Evidence-Based Strategies and Recommendations

Michael L. Hecht, Ph.D.
President, REAL Prevention LLC

REAL PREVENTION

Innovative Schools Summit
February 2023

Prevention is a process....

Let's get started...

- What are the main issues you want to address?
- What resources exist in your community?
- What obstacles exist?
- What programs do you currently have? What are the gaps?

Get buy in from key stakeholders

- Fosters community ownership of response
- Community members actively participate in development and implementation
- Ongoing support

Stakeholder Example 1: keepin' it REAL

- School-based substance use prevention
 - Recommended by Surgeon General
 - Original model NREPP program
 - Adopted by D.A.R.E. for US and international dissemination
 - Adopted by other countries (UK, Nicaragua, Mexico, Spain)
- Who would we need to consult?
 - Youth
 - Schools - district (superintendents, boards), principals, teachers, counselors
 - D.A.R.E. America
 - Funders

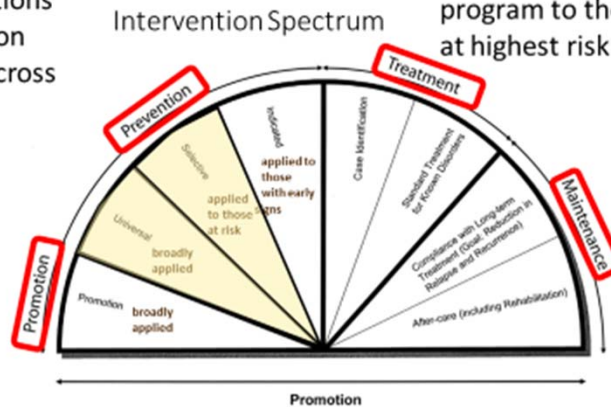

Stakeholder Example 2: Mighty Teens

- Program to reduce risky sexual behaviors among middle school youth
 - Endorsed by AASA: The Superintendent Association
- Who would we need consult?
 - Parents
 - Teens
 - Community members - clergy, Planned Parenthood, counselor, teachers, school administrators, child development experts, lesson planners
 - School districts
 - Funders

Prevention requires a comprehensive strategy

Universal interventions apply the prevention program broadly across the population.

Selective interventions only apply the prevention program to those at highest risk.

Source: Institute of Medicine (2009). Preventing Mental, Emotional and Behavioral Disorders Among Young People. O'Connell, Boat & Warner (eds.) Washington DC: National Academy Press

The root causes of prosocial and problematic development reach across all domains.

Family

School

Individual
Peer

Community

What are the one or two big causes that we can focus on to reduce addiction?

Root Causes

Risk and protective factors exist across every area of life: family, peer, school, neighborhood and individual characteristics.

Hawkins, Catalano & Miller (1992)

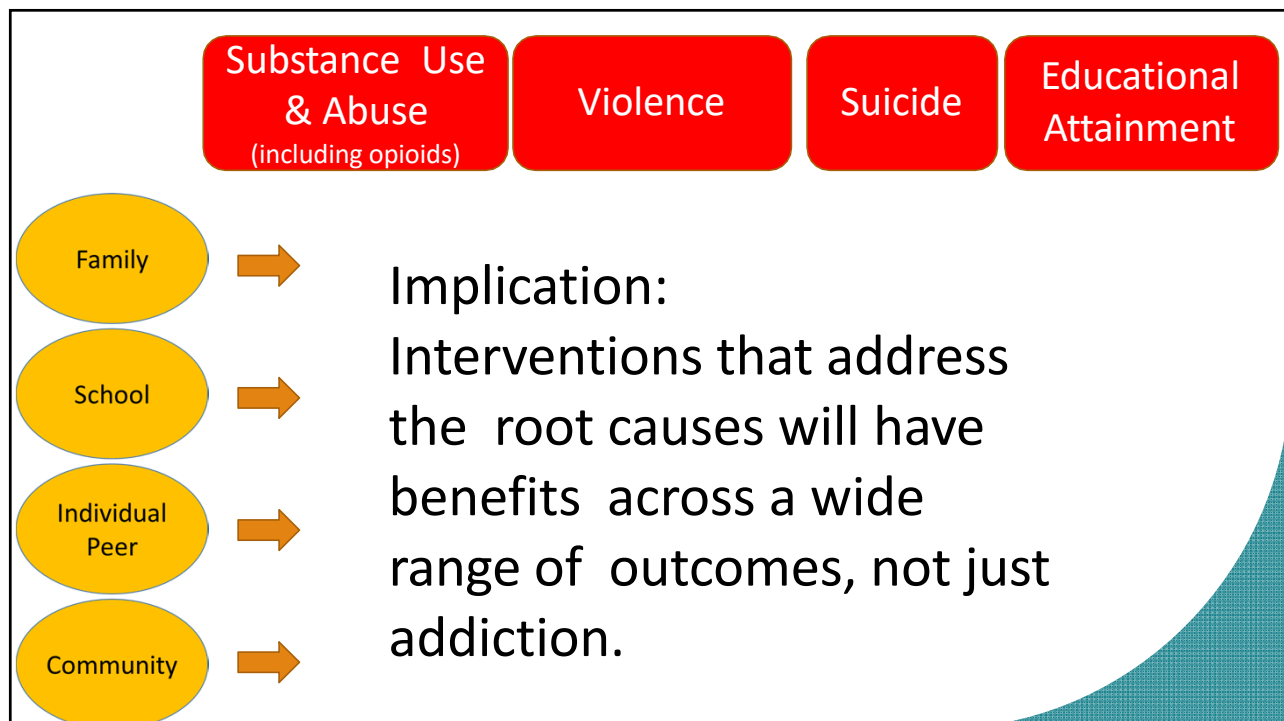

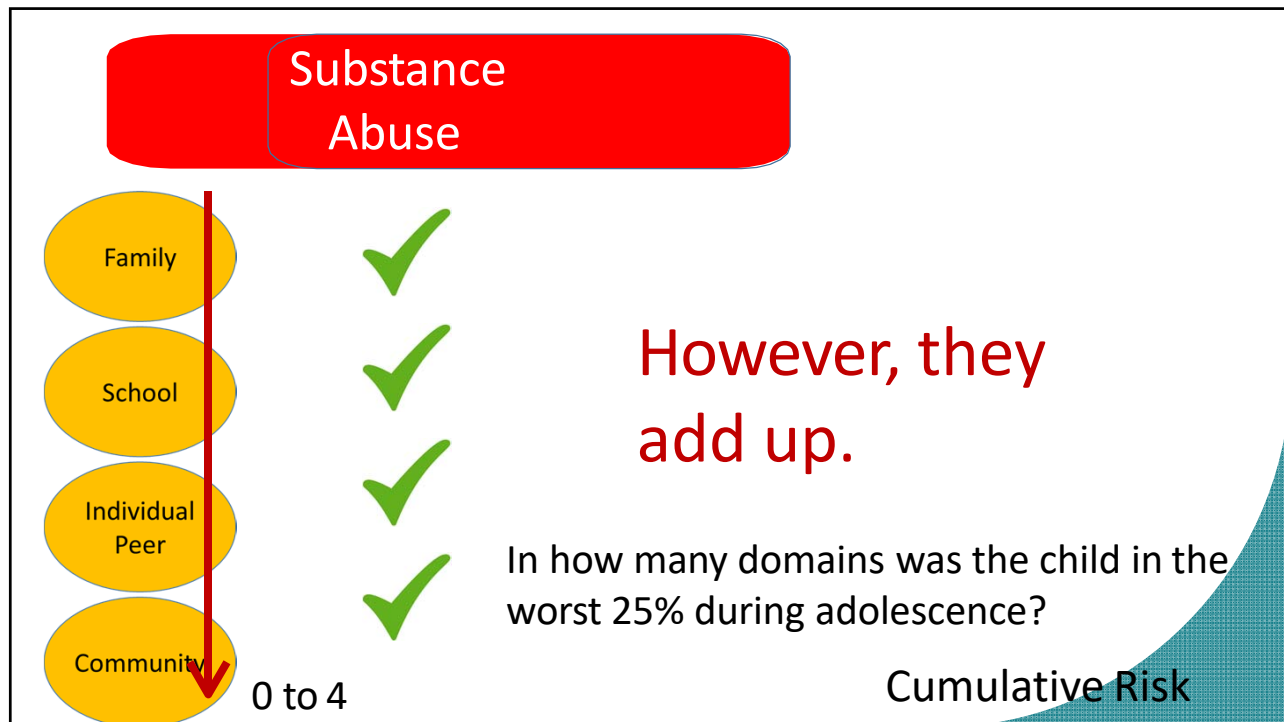

RISK FACTORS Risk factors increase the likelihood young people will develop health and social problems.	DOMAIN	PROTECTIVE FACTORS Protective factors help buffer young people with high levels of risk factors from developing health and social problems.
<ul style="list-style-type: none"> • Low community attachment • Community disorganisation • Community transitions and mobility • Personal transitions and mobility • Laws and norms favourable to drug use • Perceived availability of drugs • Economic disadvantage 	COMMUNITY	<ul style="list-style-type: none"> • Opportunities for prosocial involvement in the community • Recognition of prosocial involvement
<ul style="list-style-type: none"> • Poor family management and discipline • Family conflict • A family history of antisocial behaviour • Favourable parental attitudes to the problem behaviour 	FAMILY	<ul style="list-style-type: none"> • Attachment and bonding to family • Opportunities for prosocial involvement in the family • Recognition of prosocial involvement
<ul style="list-style-type: none"> • Academic failure (low academic achievement) • Low commitment to school • Bullying 	SCHOOL	<ul style="list-style-type: none"> • Opportunities for prosocial involvement in school • Recognition of prosocial involvement
<ul style="list-style-type: none"> • Rebelliousness • Early initiation of problem behaviour • Impulsiveness • Antisocial behaviour • Favourable attitudes toward problem behaviour • Interaction with friends involved in problem behaviour • Sensation seeking • Rewards for antisocial involvement 	PEER / INDIVIDUAL	<ul style="list-style-type: none"> • Social skills • Belief in the moral order • Emotional control • Interaction with prosocial peers

Which risks are strongest?

	Substance Abuse	Violence	Suicide	Educational Attainment
Family	✓	✓	✓	✓
School	✓	✓	✓	✓
Individual Peer	✓	✓	✓	✓
Community	✓	✓	✓	✓

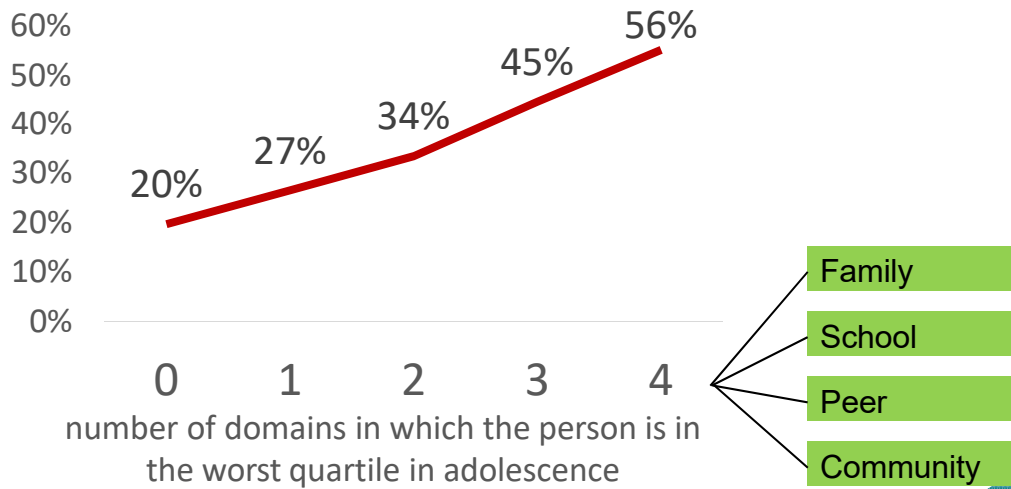

Each of these causes has about the same impact by itself.

No one factor rises above the rest as most important.

Predicting Substance Use Disorder in Adulthood from Risk Factors

Probability of substance use disorder

Where should our focus be?

- Those at highest risk?
- The most people?
- Or???

A prevention strategy that focuses **only on youths at high-risk** may fail to “move the needle” on substance use disorder in a community (prevention paradox).

DO a needs assessment

- A systematic approach to planning will help you succeed.
- Problem(s)
- Resources
- Target group(s)

Identify Problems

- Substance use
- Delinquency
- Pregnancy/STI
- Dropout
- Violence
- Others?

Identify Resources - What are yours???

Adapted from Communities that Care

	ADOLESCENT PROBLEM BEHAVIORS				
RISK FACTORS	Substance Abuse	Delinquency	Pregnancy/STI	Drop-Out	Violence
Community					
Availability of drugs					
Availability of firearms					
Community norms favorable to problem behaviors					
Media portrayals					
Mobility					
Neighborhood detachment & disorganization					
Economics					
Family					
History of problem behaviors					
Management problems					
Conflict					
Parental attitudes favorable to problem behaviors					
School					
Academic failure					
Lack of commitment					
Peer & Individual					
Early/persistent problem behaviors					
Rebelliousness					
Friends engaging in problem behaviors					

Gather information - Where should you look?

DON'T lock in on one solution

- Popular solutions
- Publicity

DO consider different types of solutions

- Universal/targeted
- Be systemic and programmatic - avoid single shot solutions; choose a process

PROGRAM MATRIX			
Family	School	Individual	Community
Prenatal/infancy	Organizational change	Healthy lifestyles	After-school
Early Childhood	Classroom organization, management, instruction	Individual program	Job training
Parent training	SEL	Mentoring	Community mobilization
Family therapy	Problem behavior management		Enforcement

DON'T Adopt Strategies that do NOT work

- Information
- Fear/Scare tactics (scared straight)
- Moralistic appeals
- Punishment or zero tolerance
- After school activities with limited supervision and absence of more potent programming
- Delinquent Group Peer Counseling and Mediation
- Didactic presentations (assemblies, lecture format)

DO pick a strategy that works

- Social norms
- Motivational interviewing
- Narrative
- Social skills, especially SEL approaches, resistance training/refusal skills
- Peer involvement, peer messages

Peer Involvement - “From kids through kids to kids”

- Keepin’ it REAL
- Mighty Teens
- REAL media

Parents, too

DON'T ignore culture

- Does culture ever NOT matter?
- Code, conversation and community

Which Cultures?

DO know what is evidence-based

- Types of evidence
 - Best:
 - More than one published randomized clinical trial or group randomized trial
 - Behavioral effects
 - Promising
 - One published RCT/GRT
 - Effects on “mediators” or precursors (efficacy, norms, intentions)

DO create a matrix of solutions if possible

Primary resources

- 2016 Surgeon General's report on addiction
 - School-based: Life Skills Training, All Stars, keepin' it REAL
 - Family-based: Strengthening the Family, The Parents Handbook (REAL Parenting)
 - U.S. Department of Health and Human Services (HHS), Office of the Surgeon General, Facing Addiction in America: The Surgeon General's Report on Alcohol, Drugs, and Health. Washington, DC: HHS, November 2016. <https://www.ncbi.nlm.nih.gov/books/NBK424857/>
- Miller, T. and Hendrie, D. Substance Abuse Prevention Dollars and Cents: A Cost-Benefit Analysis, DHHS Pub. No. (SMA) 07-4298. Rockville, MD: Center for Substance Abuse Prevention, Substance Abuse and Mental Health Services Administration, 2008.
 - <https://www.samhsa.gov/sites/default/files/cost-benefits-prevention.pdf>
 - 1-877-726-4727
- Washington State Institute for Public Policy
 - <https://www.wsipp.wa.gov/BenefitCost>

Should I adapt a program or use it as it was developed?

- Role of implementation quality
- Types of adaptations...

Communicate your solutions clearly

- Use multiple channels
- Be transparent about your process
- Anticipate misinformation
- Will your audience be low in problem awareness or disinterested? Have negative attitudes or stigmatize the problem behaviors? Lack access to information sources?
- Listen for feedback and adjust

Communities That Care (CTC)

www.CommunitiesThatCare.net

CTC is NOT an intervention.

It is a strategy to guide communities through the steps of science-based prevention.

For example: REAL Prevention's universal evidence-based programs & target populations

Program	Description	Audience	Key Endorsements
<i>keepin' it REAL</i>	substance use prevention	middle school	Surgeon General, NREPP
Mighty Teens	risky sexual behaviors	middle school	AASA
REAL media	substance use prevention	high school	4-H, NREPP
REAL parenting	alcohol misuse	high school	AASA
Student Wellness Portal	opioid misuse	high school	AASA
Opioid Rapid Response System	opioid overdoses	community	in process
HPV Stories	cancer prevention	community	ACS

So, what if your problem is opioid misuse...

- Early interventions
 - School-based: Life Skills Training, Allstars
 - Family-based: Strengthening the Families
- Adolescents
 - School-based: Student Athlete Wellness Portal/Student Wellness Portal only promising
 - Community-based: Narcan (training???) - Opioid Rapid Response System

Summary

- Start with a needs assessment.
 - Be as systematic and inclusive as possible to identify your problems and resources.
- Identify a range of effective and promising programs that fit your needs and resources.
- Select the best fitting program with the best evidence.
- Re-assess and communicate.
